Education

University of Colorado Denver

Aug 2024 – May 2026

Master of Science in Computer Science | GPA: 3.65/4.0

KL University

Aug 2020 – July 2024

Bachelor of Technology in Computer Science | GPA: 3.9/4.0

Experience

University of Colorado Denver

Aug 2024 – May 2026

Information Systems Assistant

- Supported backend operations of the StarRez CRM system using SQL, including creating new processes, debugging, and troubleshooting existing workflows.
- Generated reports to analyze housing data and inform operational and financial decision-making.
- Maintained the Housing & Dining website frontend using HTML and CSS; created graphics consistent with university branding.
- Wrote training guides for staff on navigating the housing application and provided troubleshooting support for hardware and systems.

Wealth Zone Group AI

Sep 2023 – May 2024

Software Engineering Intern

- Preprocessed and cleaned datasets using Pandas to prepare structured data pipelines for machine learning experiments.
- Built and trained ML models using PyTorch, evaluating performance using accuracy and loss metrics.
- Automated data processing workflows using Python scripts, reducing manual effort in data preparation tasks.
- Contributed to AI-driven project development within a team environment, supporting model integration and analysis tasks.

Projects

Predicting Breakdown in Deep Learning Models using Training Dynamics | Python, PyTorch, NumPy Jan 2026

- Designed a framework to detect model instability using gradient norm, loss variance, and update ratio.
- Conducted experiments on MNIST, CIFAR-10, and IMDB using CNN, LSTM, and Transformer models.
- Established baseline behavior and introduced controlled stress using learning rate changes.
- Identified early signals preceding validation accuracy drop, enabling earlier detection of breakdown.

Context-Aware AI Assistant using MCP | Python, Django, React, TypeScript, OpenAI API

Aug 2025

- Built a prototype AI assistant using MCP-style architecture to enable structured interaction between AI models and external tools.
- Designed modular components for input processing, tool selection, and response generation to support multi-step interactions.
- Implemented tool-calling workflows for file handling and API operations.
- Improved response consistency across multi-step interactions through structured context management.

Agent-Based AI Workflow for Task Automation | Python, OpenAI API, LLM APIs

Jan 2025

- Developed an agent-based system to automate multi-step tasks by decomposing complex goals into sequential subtasks using LLM-driven workflows.
- Implemented prompt chaining to enable structured step-by-step reasoning instead of relying on single-prompt responses.
- Integrated OpenAI API to power agent behavior and prompt-based decision making.
- Tested system on structured tasks to validate consistency and reliability of automated workflows.

Technical Skills

Languages: Python, Java, JavaScript, TypeScript, C++, SQL, HTML/CSS

Tools: Git, GitHub, Linux, VS Code, AWS

Frameworks and Libraries: React, Django, PyTorch, NumPy, Pandas, Streamlit

Technologies: REST APIs, Machine Learning, Deep Learning, CRM Systems, OpenAI API

Relevant Coursework

- Data Structures & Algorithms
- Natural Language Processing
- Machine Learning
- Deep Learning
- Data Science
- Generative AI
